

STARTING NOW

Working Student for Front-End Dev.

SUMMARY

Zesavi is helping employees to access knowledge within their company more efficiently. We offer an intuitive all-in-one software solution, enabling staff on every level to easily record & distribute short, informative videos.

For zesavi, progressive user-centricity & engineering excellence are key differentiators in the growing market for knowledge management software. We observe existing enterprise solutions failing to support their users in creating high-quality video content for capturing & sharing internal workflows or product & process rollouts. On the contrary, companies like Facebook (Instagram) or ByteDance (TikTok) set examples of how to enable people to deliver information in short, animated videos. We see our software engineers at the forefront of creating the most intuitive knowledge sharing system as they display versatility, leadership, & passion to tackle one of the most urgent problems in the modern workplace: Sharing knowledge – simply & efficiently.

WHAT WE EXPECT FROM YOU

- Interest in B2B software startups & content management systems
- Passion, resilience & willingness to learn new things fast in a dynamic environment
- Comfort with product responsibility & rolling out new features
- Time commitment of minimum 15 hours per week

PREFERRED QUALIFICATIONS

- You have successfully completed projects using JavaScript & TypeScript
- You are familiar with the front-end framework Angular
- You have experience with design & UI, e.g., HTML & CSS

RESPONSIBILITIES

- You will contribute your ideas & work closely together with our CTO & CPO
- You will be working on our web dashboard & implement new features
- You will manage parts of the project, priorities, deadlines & deliverables individually

Sounds interesting? Besides competitive pay, we offer a great company & learning culture. Please send your CV &/or GitHub profile to founder@zesavi.com. We'd love to hear from you!
